HARSH VORA

+1(312)-792-5717 | harshvora242@gmail.com | linkedin.com/in/voraharsh | github.com/VoraHarsh | harshvora.dev | Chicago, IL

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience building scalable Java/Spring Boot microservices and event-driven systems across financial services and healthcare. Improved data-pipeline scalability by 40%, increased throughput by over 2x, and reduced latency by 65%. Experienced in production support, workflow automation, AI-assisted development, and cross-team delivery.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Python, Spring WebFlux, Project Reactor, TypeScript, JavaScript, React

Backend & Messaging: REST APIs, Microservice Architecture, RabbitMQ, Netflix Conductor, Server-Sent Events (SSE)

Cloud, DevOps & Monitoring: Docker, Kubernetes, Maven, Jenkins, AWS, Azure, Git, Kibana (ELK Stack)

Databases & Testing: PostgreSQL, MongoDB, MySQL, Redis, JUnit, Mockito, WireMock, Playwright, Serenity, Cucumber

Practices & Automation: Agile/Scrum, CI/CD, Event-Driven Architecture, Jira/Confluence Automation

PROFESSIONAL EXPERIENCE

BrainRidge Consulting Inc. (Client: BMO) **Jan 2026 – Present**

Software Engineer | Chicago, IL

- Built a Java/Spring Boot microservice for BMO's loan payment platform, including 4 RESTful CRUD endpoints that let customers manage external bank accounts and pay loans.
- Diagnosed and resolved 3 major production and integration defects across loan payment and credit card workflows through log analysis and root-cause investigation.
- Developed Jira-Confluence release automation to generate epics, stories, and requirement-based subtasks, reducing an estimated 1-2 hours of manual effort per release.
- Contributed to 2 production releases (1 major, 1 minor), collaborating with frontend developers and dependent service teams to validate end-to-end workflows and ensure successful feature delivery.

GE HealthCare **Oct 2021 – Nov 2025**

Software Engineer | Chicago, IL *Jun 2024 – Nov 2025*

- Designed reactive, event-driven microservices using Java, Spring Boot, Project Reactor, RabbitMQ, and PostgreSQL, improving data-pipeline scalability by 40%.
- Built a real-time SSE framework that delivered 2x+ throughput for multi-client event streaming with reduced latency.
- Reduced data-fetch latency by ~65% (28s to under 10s) using reactive parallelization and dynamic pagination.
- Standardized REST APIs and CI/CD pipelines with cross-team architects, cutting deployment issues by 30%.
- Led feature grooming and planning sessions, breaking high-level product goals into executable backend tasks for team members.

Software Engineer Specialist | Chicago, IL *Oct 2021 – Jun 2024*

- Engineered distributed microservices for imaging workflows, increasing system throughput by 3-5x.
- Expanded automated testing (JUnit, WebTestClient, Playwright, Serenity) reducing release defects by 25%.
- Containerized and deployed services using Docker and Kubernetes, reducing environment issues by 30%.

SQUADDD **Jul 2021 – Oct 2021**

Software Developer Intern – MERN Stack | Chicago, IL

- Built REST APIs and middleware using Express.js, Passport.js, JWT & MongoDB Atlas cutting integration effort by 20%.
- Built a secure authentication and session system for 1000+ active users with role-based access control.

EDUCATION

Illinois Institute of Technology – *Master of Computer Science | Chicago, IL* **Aug 2019 – May 2021**

Mumbai University – *Bachelor of Engineering in Computer Engineering | Mumbai, IN* **Aug 2015 – May 2019**

CERTIFICATIONS

Oracle Certified Professional Java Programmer
